

Michael Shea

Senior QA Engineer | Automation | API Testing | AI

Medford, MA | 617-840-1989 | m.shea2481@gmail.com | linkedin.com/in/msshea

Professional Summary

Senior QA Engineer with 10+ years of experience delivering high-quality SaaS and enterprise applications in Agile environments. Expertise in both manual testing and automated test suites, API validation, and defect management. Proven ability to improve software quality by isolating bugs and driving their resolution. Enjoys collaborating closely with Engineering and Product teams and using technical skills and product knowledge to perform root cause analysis. Experience supporting high-volume customer-facing platforms and serving as the only QA resource across multiple concurrent projects.

Technical Skills

- Testing & QA: Functional Testing, Regression Testing, Integration Testing, UAT, Release Validation
- Automation: Playwright, Selenium WebDriver, Selenium IDE, Prompt engineering
- API & Data: Postman, REST APIs, JSON, SQL, Relational Databases
- CI/CD & Tools: GitHub Actions, CircleCI, Git, Sourcetree, JIRA, Xcode Simulator, Metabase
- Programming: Ruby, Rails, JavaScript, html.erb, CSS, jQuery, Shell Command Line, Bash, Git, JSON
- Methodologies: Agile, Scrum, Defect Management, Product Support

Professional Experience

Lone Wolf Technologies | Senior QA Engineer | Nov 2017 – Apr 2026

- Led end to end quality assurance efforts for a high-traffic SaaS application called “Propertybase GO” later Lone Wolf “Front Office” - a CRM/Website tool sold to real estate brokerages and teams of agents.
- Designed and executed comprehensive test plans supporting frequent software releases and improving overall platform stability.
- Performed REST API testing using Postman, validating authentication workflows, JSON responses, and third-party integrations.
- Expanded regression coverage through Selenium WebDriver automation to improve testing efficiency and reduce manual effort.
- Partnered closely with Engineering, Product, and Design teams to identify risks early and refine requirements.
- Unearthed and managed the lifecycle of thousands of defects using JIRA, contributing to higher release quality and faster issue resolution.
- Supported CI/CD workflows by using CircleCI to validate build quality and gain exposure to GitHub Actions.
- Served as the sole QA resource for a team of 5–10 engineers, therefore was constantly balancing multiple projects and release schedules.
- Contributed to front-end enhancements using Ruby helpers, HTML, CSS, and JS to improve user experience.

Mass General Brigham | Testing Coordinator | 2015 – 2017

- Led testing efforts for critical Epic EMR applications supporting Pharmacy and Oncology teams.
- Developed and executed test scenarios for upgrades, integrations, and production releases.
- Collaborated with technical teams and end users to isolate defects and validate fixes.
- Provided on-site support during major healthcare deployments in high-pressure environments.

Technical Projects

- Developed a robust Postman collection with API validation workflows and JSON response assertions.
- Supported CI/CD pipelines by using CircleCI to validate release readiness while also gaining exposure to Github Actions and automating deployment pipelines.
- Built and maintained personal Selenium and Playwright automated test suites to grow technical skills.
- Built and maintained a responsive website for a friend by using Ruby on Rails, CSS grid, and some JS.

Education

University of Massachusetts Amherst – Isenberg School of Management

Bachelor of Business Administration – Operations & Information Management

Certification

ISTQB Certified Tester Foundation Level (Credential ID 20-CTFL-00768-USA)
