

Michael Stephen Shea

Senior QA Engineer | Test Automation

Medford, MA | 617-840-1989 | m.shea2481@gmail.com | linkedin.com/in/msshea

Professional Summary

Software QA Engineer with 10+ years of experience delivering high-quality SaaS and enterprise applications within fast-paced Agile environments. Expert in both manual and automated testing, API validation, and defect management with a focus on leveraging AI to optimize testing efficiencies. Proven ability to elevate software quality by isolating complex bugs and driving swift cross-functional resolutions. A collaborative partner to Engineering and Product teams, utilizing deep technical skills and product knowledge to perform rigorous root-cause analysis. Highly adaptable and resourceful, with a track record of supporting high-volume, customer-facing platforms and serving as the sole QA anchor across multiple concurrent projects.

Technical Skills

- Testing & QA: Functional, Regression, Integration Testing, UAT, Release Validation, Exploratory Testing
- Automation: Playwright, RSpec, SimpleCov, Selenium WebDriver, Mocha, Chai, Selenium IDE
- API & Data: Postman, REST APIs, JSON, SQL, Relational Databases
- CI/CD & Tools: GitHub Actions, CircleCI, Git, Sourcetree, Xcode Simulator, JIRA, Confluence, BrowserStack
- Programming: Ruby, Rails, Typescript, JavaScript, Embedded Ruby (.html.erb), CSS, Node.js, jQuery, Shell Command Line, Bash, Git, JSON, Java, Kotlin, prompt engineering
- Methodologies: Agile, Scrum, Waterfall, Kanban, Defect Management, Product Support

Professional Experience

Lone Wolf Technologies, Inc. | Senior QA Engineer | Nov 2017 – Apr 2026

- Helped grow a web application from startup phase through multiple mergers and acquisitions and finally become integrated into an enterprise product suite with shared leads/contacts and onboarding process.
- Led end to end quality assurance efforts for the high-traffic SaaS application sold to real estate brokerages and teams of agents.
- Designed and executed comprehensive test plans supporting daily software releases and improving overall platform stability and design accuracy.
- Developed a robust Postman collection with REST API validation workflows and JSON response assertions.
- Expanded automated test coverage by writing ruby specs (RSpec) to improve testing efficiency and reduce manual effort.
- Initiated a migration to using Playwright for automated UI testing
- Partnered closely with Engineering, Product, and Design teams to identify risks early and refine requirements for the application.
- Unearthed and managed the lifecycle of thousands of defects using JIRA thus creating a higher quality product, reducing the number of client-facing bugs, and achieving faster issue resolution.
- Served as the sole QA resource for a team of 5–10 engineers, therefore was constantly balancing multiple projects and release schedules.
- Contributed to front-end enhancements using Ruby, HTML, CSS, and JS to improve user experience.
- Garnered exposure to GitHub Actions and how to automate deployment pipelines.

- Supported CI/CD pipelines by utilizing CircleCI to validate release readiness when merging changes.
- Gained understanding of mobile app development and distribution workflows, used TestFlight.

Mass General Brigham | Testing Coordinator | 2015 – 2017

- Led testing efforts for critical Epic EMR applications supporting Pharmacy and Oncology teams.
- Developed and executed test scenarios for upgrades, integrations, and production releases.
- Collaborated with technical teams and end users to isolate defects and validate fixes.
- Provided on-site support during major healthcare deployments in high-pressure environments.
- Gained experience handling sensitive health data, HIPAA

Technical Projects

- Built an automated test suite for Propertybase (now Lone Wolf Front Office) using Selenium WebDriver, Mocha, and Chai (assertion library) to test a new, redesigned property search feature.
- Gained experience with the Kotlin framework for automated testing. Other products in the “Promote” product suite used this framework versus RSpec.
- Built and maintained a Rails web app from scratch, using Embedded Ruby (.html.erb), HTML, CSS grid, Bootstrap, and JavaScript.
- Built an automated test suite using Playwright and TypeScript to validate features.
- Used the Page Object Model, fixtures for scalability, dynamic test data, and modular structures.
- Performed database queries using Active Record for sanity checks.
- cPanel and GoDaddy for hosting (*currently not on a domain as of 9/13/26*)
- **GitHub Repository:** <https://github.com/mshea2481/personal-playwright>
- Postman Workspace ID: 1f6598be-b817-49a0-8143-2e3fc5e3be95

Education

University of Massachusetts Amherst – Isenberg School of Management

Bachelor of Business Administration – Operations & Information Management

Reading Memorial High School – Reading, MA

Certification

ISTQB Certified Software Tester Foundation Level (Credential ID 20-CTFL-00768-USA)
